PROFESSIONAL SUMMARY

Computer Science undergraduate at United International University (expected 2027), applying for a junior .NET Developer role. Built three ASP.NET Core Web API projects in C# with PostgreSQL and Entity Framework Core, covering REST API development and integration, database design, JWT authentication and role-based authorization. Writes layered, maintainable code and works in a team through Git and pull requests.

TECHNICAL SKILLS

Languages: C#, SQL, C++

.NET and Backend: .NET 8 and .NET 10, ASP.NET Core Web API, Entity Framework Core, RESTful API design, REST API integration (typed HttpClient), FluentValidation, SignalR, background services

Databases: PostgreSQL, relational database design, EF Core code-first migrations, transactions, foreign keys and indexes

Security: JWT authentication, refresh tokens, role-based authorization, BCrypt password hashing

Practices and Tools: OOP, dependency injection, layered architecture, global exception handling, Git and GitHub pull requests; API testing and debugging with Swagger and .http files

Frontend (supporting): React.js and Axios to consume my REST APIs; JavaScript fundamentals still developing

PROJECTS

ShilpoHubBD – marketplace and business platform for Bangladeshi artisans github.com/shamiulriyad/ShilpoHubBD

C#, ASP.NET Core 8 Web API, EF Core, PostgreSQL, JWT, FluentValidation, React. Team of 5; wrote 790 of 964 backend commits.

- Designed a 312-table PostgreSQL schema through 100+ EF Core migrations. Split the backend into Domain, Application, Data, Infrastructure and Api projects, so business logic does not depend on the database or the HTTP layer.
- Integrated third-party REST APIs (OSRM routing, Nominatim geocoding, Overpass, Gemini) through 15 typed HttpClient clients behind interfaces, with timeouts, handling of failed responses and network errors, and rule-based fallbacks where a failed call should not break the request.
- Built JWT login with BCrypt password hashing and refresh tokens stored only as hashes and rotated on every refresh. Reuse of a revoked token revokes all of that user's sessions. Enforced 9 roles, with ownership checks so producers manage only their own products, orders and stock.
- Wrote an inventory service that logs every stock change, rejects changes that would make stock negative and lists low-stock products. Added a global exception handler that maps errors to 400, 401, 404 and 409 responses.
- Merged 96 team pull requests and wrote 14 of the team's 17 regression-check programs, which confirm key features still work after changes.

Avenzaq – multi-vendor e-commerce platform github.com/shamiulriyad/Avenzaq

C#, ASP.NET Core (.NET 10) Web API, EF Core, PostgreSQL, JWT, SignalR, React. Personal project.

- Implemented checkout as a single database transaction. The cart is split into a sub-order per seller with commission and net amount, stock is reduced per product or variant, and the whole order rolls back if any item is out of stock.
- Secured Customer, Seller and Admin endpoints with JWT role checks; sellers need admin approval and update only their own sub-orders.
- Stored notifications in PostgreSQL with paging and unread counts, and pushed them live to per-user SignalR groups.

E-Learning Platform – university course and competition platform github.com/shamiulriyad/DatabaseHub

C#, ASP.NET Core 8 Web API, EF Core, PostgreSQL, JWT, SignalR, React. Team project; built the backend.

- Designed a 48-table PostgreSQL schema (universities, courses, enrollments, assignments, competitions) with foreign keys, unique indexes and delete rules, evolved through 23 EF Core migrations.
- Built 24 REST API controllers with JWT authentication, Student, Teacher and Admin roles and BCrypt password hashing, and tested them with Swagger and .http request files.
- Wrote a background service that moves competitions from Upcoming to Ongoing to Completed on schedule, and used SignalR hubs to push course and community updates.

EDUCATION

BSc in Computer Science and Engineering, United International University (UIU), Dhaka 2023 – 2027 (expected)

PROBLEM SOLVING AND ACHIEVEMENTS

- Solved 575+ problems in C++ (Codeforces 252, CodeChef 192, LeetCode 131); LeetCode rating 1562, CodeChef rating 1448.
- 2nd runner-up, UIU CSE Project Show (March 2026), with the E-Learning Platform. 4th place, UIU Team Contest (July 2026).
- 7 hackathons in 2026; our team placed in the top 70 of 700+ teams at Infinity AI BuildFest.
