SUMMARY

CSE undergraduate at United International University (graduating 2027), applying for a Software Engineer Internship. Builds full-stack web applications with C# and ASP.NET Core, PostgreSQL and React, from API and database design to authentication and real-time features. Problem-solving base from competitive programming in C++ (575+ problems solved) and team experience with Git and pull requests.

TECHNICAL SKILLS

Languages: C#, C++, SQL, JavaScript, Java

Fundamentals: Data structures and algorithms, OOP (interfaces, dependency injection), layered architecture

Backend: ASP.NET Core Web API (.NET 8/10), EF Core, REST APIs, JWT, role-based authorization, FluentValidation, SignalR, background services

Databases: PostgreSQL, schema design (keys, indexes, delete rules), EF Core code-first migrations, transactions

Frontend: React, Axios, Vite

Testing and tools: xUnit, EF Core InMemory, regression-check programs, Swagger, .http files, Git, GitHub

PROJECTS

ShilpoHubBD – marketplace and business platform for Bangladeshi artisans github.com/shamiulriyad/ShilpoHubBD

ASP.NET Core 8, EF Core, PostgreSQL, React. Team of 5; wrote 790 of 964 backend commits, merged 96 team pull requests.

- Modelled a 312-table PostgreSQL schema through 100+ EF Core migrations, and split the backend into Domain, Application, Data, Infrastructure and Api projects so business logic does not depend on the database or HTTP layer.
- Built JWT login with BCrypt password hashing and refresh tokens stored only as hashes and rotated on every refresh; reuse of a revoked token revokes all of that user's sessions. Enforced 9 roles, with ownership checks so producers manage only their own products, orders and stock.
- Wrote an inventory service that logs every stock change with previous and new values, rejects changes that would make stock negative, and lists low-stock products. A global exception handler maps errors to 400, 401, 404 and 409 responses.
- Wrote 14 of the team's 17 regression-check programs (search, moderation, partnerships, tourism routing, translation).

Avenzaq – multi-vendor e-commerce platform github.com/shamiulriyad/Avenzaq

ASP.NET Core (.NET 10), EF Core, PostgreSQL, JWT, SignalR, React. Personal project.

- Implemented checkout as a single database transaction: the cart is grouped by seller into sub-orders with commission and net amount, stock is reduced per product or variant, and the whole order rolls back if any item is out of stock.
- Secured Customer, Seller and Admin endpoints with JWT role checks; sellers need admin approval and can update only their own sub-orders.
- Stored order notifications in PostgreSQL with paging and unread counts, and pushed them in real time to per-user SignalR groups.

E-Learning Platform – university course and competition platform github.com/shamiulriyad/DatabaseHub

ASP.NET Core 8, EF Core, PostgreSQL, JWT, SignalR, React. Team project; built the backend.

- Designed a 48-table PostgreSQL schema (universities, courses, enrollments, assignments, competitions) with foreign keys, unique indexes and delete rules, evolved through 23 EF Core migrations.
- Built 24 REST controllers with JWT authentication, Student, Teacher and Admin role checks, and BCrypt password hashing.
- Wrote a background service that moves competitions from Upcoming to Ongoing to Completed on schedule, and used SignalR hubs to push course and community updates.

EDUCATION

BSc in Computer Science and Engineering, United International University (UIU), Dhaka 2023 – 2027 (expected)

COMPETITIVE PROGRAMMING AND ACHIEVEMENTS

- Solved 575+ problems (Codeforces 252, CodeChef 192, LeetCode 131) across 55+ contests, mainly in C++; LeetCode contest rating 1562, CodeChef rating 1448.
- 4th place, UIU Team Contest (July 2026). 2nd runner-up, UIU CSE Project Show (March 2026), with the E-Learning Platform.
- Took part in 7 hackathons in 2026; our team placed in the top 70 of 700+ teams at Infinity AI BuildFest.
