Md Shamiul Islam Riyad

Backend Engineer Intern Candidate | C# · ASP.NET Core · PostgreSQL · REST APIs

Bangladesh | github.com/shamiulriyad | linkedin.com/in/md-shamiul-islam-riyad-31b8352b4 | riyadsn.vercel.app

PROFESSIONAL SUMMARY

CSE undergraduate at United International University focused on backend engineering. Builds RESTful APIs with C#, ASP.NET Core 8, EF Core and PostgreSQL, covering JWT authentication, role- and ownership-based authorization, transactional multi-vendor workflows and React integration. Seeking a Backend Engineer Intern role to help build reliable CRM services.

TECHNICAL SKILLS

Languages: C#, SQL, JavaScript, Java, C++

Backend: ASP.NET Core 8 Web API, Entity Framework Core, RESTful API design, SignalR, FluentValidation, Swagger

Databases: PostgreSQL, relational schema design, EF Core code-first migrations, indexes and constraints, full-text search

Security: JWT access/refresh tokens, role-based and ownership authorization, BCrypt hashing, rate limiting, CORS

Engineering: OOP, Clean Architecture, repository and service layers, dependency injection, DTOs, centralized error handling

Tools: Git, GitHub, Swagger UI, Docker (basic), React.js integration via Axios and the SignalR client

BACKEND PROJECTS

ShilpoHubBD — Multi-Vendor Artisan Marketplace API — github.com/shamiulriyad/ShilpoHubBD

ASP.NET Core 8, C#, EF Core, PostgreSQL (Supabase), JWT, SignalR, FluentValidation, React 19

- Structured the API as five Clean Architecture projects with repository interfaces, a service layer, FluentValidation and a global exception handler that maps domain errors to consistent 400/401/404/409 responses.
- Implemented JWT authentication with BCrypt hashing and hashed refresh tokens rotated on refresh and revoked on logout; enforced nine roles plus ownership checks so producers manage only their own products and orders.
- Built producer order fulfillment, ranked PostgreSQL full-text search, a notification inbox, a payment callback endpoint and third-party API integrations with fallbacks; covered service logic with 17 regression suites.

Avenzaq — Multi-Vendor E-Commerce Backend — github.com/shamiulriyad/Avenzaq

ASP.NET Core, C#, EF Core, PostgreSQL, JWT, SignalR, React

- Implemented checkout that splits a cart into per-seller sub-orders in one database transaction, decrements variant- or product-level stock, and rolls back the whole order when inventory is insufficient.
- Secured Admin, Seller and Customer endpoints with JWT and role-based authorization, including admin approval of sellers and ownership checks on seller order-status updates.
- Created in-app notifications for order events (placed, confirmed, shipped, delivered) stored in PostgreSQL with paginated unread counts, served via REST and a per-user SignalR hub.

E-Learning Platform API — Academic Team Project (DBMS) — github.com/shamiulriyad/DatabaseHub

ASP.NET Core 8, C#, EF Core, PostgreSQL, JWT, SignalR, React

- Modeled a 48-table PostgreSQL schema (universities, courses, enrollments, assessments, competitions) with keys, unique indexes and delete rules, evolved through EF Core migrations.
- Secured 25 REST controllers with JWT authentication, Student/Teacher/Admin role policies and BCrypt password hashing.
- Automated competition lifecycle transitions with a hosted background service and pushed enrollment and community updates through SignalR.

EDUCATION

BSc in Computer Science and Engineering — 2023 – 2027 (Expected)

United International University (UIU), Dhaka, Bangladesh

ACHIEVEMENTS

- **2nd Runner-Up, UIU CSE Project Show** (Mar 2026) — full-stack application judged by an industry panel.
- Competed in 7 hackathons in 2026, including bKash SUST CSE Carnival; top 70 of 700+ teams at Infinity AI BuildFest.
- Solved 575+ problems on Codeforces, CodeChef and LeetCode; certified in HackerRank Problem Solving (Basic).
